

The Subscribers

PROPOSE to bring Water from the Turknott or Indian Springs, to Augusta. The plan proposed will deliver water in any part of the city as cool as at the spring. The plan should be as follows—viz. the Tubes to be of good hart Pine, with a four inch bore, sunk in the ground to the depth of from five to thirty feet, as the situation of the ground requires, so as to have the spring water of the earth round the pipes for the purpose of retaining the Temperature of the water, and preserve the Tubes from ever decaying, and the water to be raised at convenient distances on the main street, by means of hydrants with cocks. If this plan should be thought expedient, the Honorable City Council may rely on the work being done on the most reasonable terms, and it would be commenced in one month and completed in six months—and the work warranted.

Tho's. S. Reid.
