
Our Water Supply.

The actual increase of depth of Monbagen's water during the late storm, was one foot and two inches, } Depth before storm, three feet and a half—after storm, four feet and eight inches.

The break in pipe on James St., is being repaired at present writing. Other work is progressing as fast as possible under present circumstances.

We are assured, officially, that conditions are favorable for a water supply for families in a very few days. Monbagen continues to increase in volume, and the stream thence to our place will soon flow again—and if all places in our midst cannot be partakers of its favors, private houses will, at any rate, be served without either long or unnecessary delay.
