**PEAT FOR FUEL.** — The announcement that a peat mine in Bloomfield was to be opened at once, to supply this city with fuel, has led to much inquiry. We understand that a company is being organized to work this peat meadow at once. A branch track from the railroad will be laid to the meadow, so that the peat may be taken out by cars as soon as it is ready. The Central Railroad Company will bring the article to this city by the way of Canandaigua as fast as it can be cut, dried and made ready for the market.

As to the cost of the fuel we are unable to say anything positively. We are assured by those concerned, however, that it will be sold at such rates as to make it as cheap as coal at eight dollars per ton. The stock of the company will be held by gentlemen who will be content with a fair profit, and who will consent to no combination with dealers in coal or other fuel.
