
Water Works.

It will be seen by reference to the copy of a bill which has just passed the Legislature (published in the *Union*) that a commission has been authorized to construct water works for this city. The Mayor is authorized by the act to name the commissioners, and has done so. The gentlemen named are well-known citizens, who must be fully aware of the importance of the duty they undertake and the wants of the city in respect to water. We trust they will enter upon the work with a purpose to do that which will best serve the public, and make a thorough investigation before taking action. They will have great difficulty in adopting any plan that will please everybody, so various are the opinions that prevail in this community on the water question—the best sources and the best way of reaching them. The public will anxiously await the action of the commission.
